

Arsenic Water Testing Among Homes with Private Well Water by County, Maine 2012 and 2014 Combined Response: Yes

About this chart

This chart shows results from survey questions that ask about testing well water for arsenic. These data are from the Maine Behavioral Risk Factor Surveillance System (BRFSS), a random-digit-dial telephone survey of non-institutionalized Maine adults ages 18 years and older. Survey participants were asked, "Arsenic is not included in all water tests. Have you tested your well water for arsenic?" This question was asked of respondents who gave a "yes" response to the questions: "Do you get any of your water from a well?" and "Have you ever had your well water tested?" Estimates for "2012 and 2014" are calculated by combining responses from surveys conducted in each year.

In order for these data to be representative of all homes in Maine, and to adjust for survey participant non-response, statistical weights were used to calculate the estimated percent.

Source of these data

The Maine BRFSS provided these data. The table was prepared by the Maine Environmental Public Health Tracking Program. Data updated: 01/2017. Display updated: 01/2017.
