

Percent of Wells that Exceed State Guideline for Arsenic of 10 ug/L by County, Maine

About this chart

This chart shows the percent of private wells tested for arsenic that exceeded Maine's Maximum Exposure Guideline among private wells with water samples tested by the State of Maine Health and Environmental Testing Laboratory between the years 1999 and 2013. Maine's Maximum Exposure Guideline for arsenic is 10 micrograms per liter (ug/L).

Source of these data

The State of Maine Health and Environmental Testing Laboratory provided these data. The figure was prepared by the Maine Environmental Public Health Tracking Program. The complete data set contains water test results from 51,347 private wells in Maine. Data updated: 01/2017. Display updated: 01/2017.
